

## **Clean Harbors to Fuel Training With GeoLearning's Managed Learning Services**

### **West Des Moines, Iowa -- Jan. 4**

GeoLearning Inc., a provider of Managed Learning Services and hosted learning platforms, announced that Clean Harbors Environmental Services Inc., a provider of environmental and hazardous waste management services, has selected the GeoExpress learning management system to instantly deploy Web-based training initiatives for its 3,800 employees as part of a three-year learning services contract.

Clean Harbors required a cost-effective, rapidly deployable e-learning solution to deliver courseware to its 3,800 employees located in more than 100 locations in the United States, Canada, Mexico and Puerto Rico. Via GeoExpress, Clean Harbors' employees will have access to the complete Syntrio online curriculum of employment law compliance, workers compensation, OSHA health & safety, and professional development courses. GeoExpress' reporting utilities will also provide Clean Harbors with access to detailed course statistics, usage information and student proficiency metrics.

GeoLearning's award-winning Software as a Service model means the GeoExpress platform is delivered entirely over the Internet, eliminating all the headaches, hassles and risks associated with traditional hardware and software implementations. GeoExpress is an out-of-the-box solution that can be up and running in days. Because GeoLearning hosts the software on its servers and Clean Harbors' learners access it through a browser, there is little set-up and both system and training content updates are automatic.

GeoLearning will also provide Internet hosting, security and maintenance services, vendor management, professional services, and 24x7 Help Desk support for Clean Harbors' employees and administrators as part of the 3-year learning services contract.
